

## Artwork File & Submission Guidelines

### Artwork Resolution:

Image files should be supplied at 300 Pixels/Inch at full scale final artwork.

### Color Mode:

Our color mode is CMYK. RGB files and Pantone colors will be converted to CMYK.

### File Format:

Files can be raster or vector format.

When using vector artwork convert any text to outlines or paths. Files should be saved as EPS or PDF.

For raster format, files can be supplied as PSD, PDF, TIFF, or JPG (Resolution: Maximum Quality). Apply minimum file compression for all file types.

Vector artwork is scalable to any size at the maximum resolution.

A single file should be made for each individual piece of glass on the project at full scale and labeled accordingly.

### Image Bleed and Crop Marks:

All artwork files should include a minimum image bleed of at least 10mm or 3/8", applied to all edges of each artwork file. In addition, crop marks should be placed at the edge of the bleed on all edges of artwork.

### File Transfer:

Files can be submitted to our transfer site at <https://deppglass.wetransfer.com>
